

Greedy Method

Feasible Solutions
1 Optimal solution

Optimization problem

problem so greedy method is used for solving optimization

Greedy Method

- 
1. Greedy Method
 2. Dynamic Programming
 3. Branch and Bound

→ optimization problems

these three methods are for solving
optimization problem the approach

Greedy Method

Algorithm Greedy(a, n)
{

for $i = 1$ to n do
{

$x = \text{Select}(a);$

if Feasible(x) then

Solution = Solution + x ;

}

}

$n = 5$

a	a_1	a_2	a_3	a_4	a_5
	1	2	3	4	5

size and it is having some data some
values input values

Greedy Method

Greedy(a, n)

$n=5$

a_1	a_2	a_3	a_4	a_5
1	2	3	4	5

$i = 1$ to n do

 Select x_i ,
 then

 Solution = Solution + x_i ;

problem is given and that problem is
having

Greedy Method

Alg Greedy(a, n)

{

1 to n do

1. $x \leftarrow a_i$

2. $\text{solution} \leftarrow \text{solution} + x;$

$n=5$

a_1	a_2	a_3	a_4	a_5
1	2	3	4	5

having a input of some size and N is the size and it is having some data

Greedy Method

Algorithm Greedy(a, n)

$n=5$

a	a_1	a_2	a_3	a_4	a_5
	1	2	3	4	5

for $i = 1$ to n do

$x = \text{Select}(a);$

 if Feasible(x) then

 Solution = Solution + x ;

values input values now it will go
through all those input values

Greedy Method

Algorithm Greedy(a, n)

$n=5$

a_1	a_2	a_3	a_4	a_5
1	2	3	4	5

for $i=1$ to n do

$x = \text{select}(a);$

 if $\text{feasible}(x)$ then

$\text{Solution} = \text{Solution} + x;$

through all those input values from 1 to n and each time it will select something

Greedy Method

Algorithm Greedy(a, n)

$n=5$

a	a_1	a_2	a_3	a_4	a_5
	1	2	3	4	5

for $i = 1$ to n do

$x = \text{Select}(a);$

if Feasible(x) then

Solution = Solution + x ;

from a and call it as X if that X is feasible that is one input one by

Greedy Method

Algorithm Greedy(a, n)

$n=5$

a_1	a_2	a_3	a_4	a_5
1	2	3	4	5

for $i = 1$ to n do

$x = \text{Select}(a);$

if Feasible(x) then

Solution = Solution + x ;

from a and call it as X if that X is feasible that is one input one by one it

Greedy Method

Algorithm Greedy(a, n)

$n=5$

a	a_1	a_2	a_3	a_4	a_5
	1	2	3	4	5

for $i = 1$ to n do

$x = \text{Select}(a);$

if Feasible(x) then

Solution = Solution + x ;

will pick up the input and that input if
it is feasible it will include in the

Greedy Method

Algorithm Greedy(a, n)
{

for $i = 1$ to n do
{

$x = \text{Select}(a);$

if Feasible(x) then

Solution = Solution + x ;

$n = 5$

a	a_1	a_2	a_3	a_4	a_5
	1	2	3	4	5

solution if it is feasible it is
included in solution so this comes
