

$$\underline{T(n)} = 2T(n/2) + \underline{cn}$$

## Recursive Tree

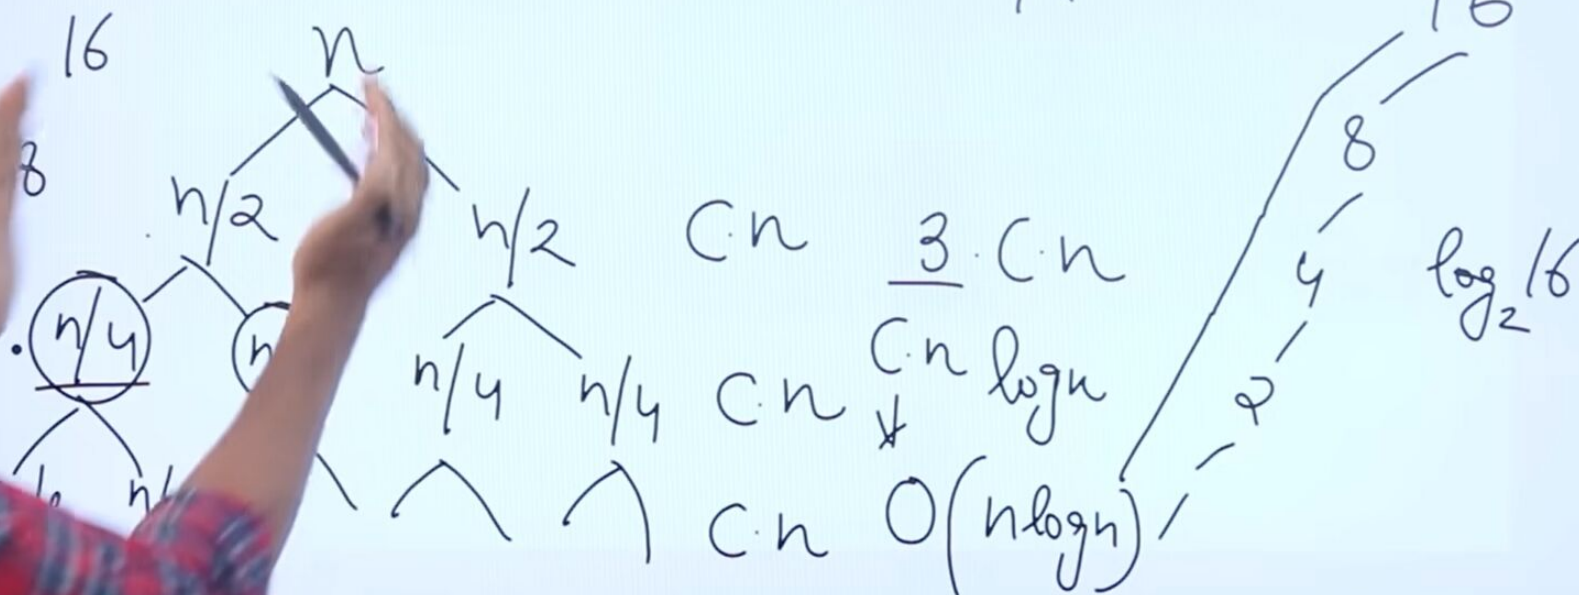

$$\frac{n - n}{n/2}$$

This  $n$  by 4 will be divided into  $n$  by 8.

$$\underline{T(n)} = 2T(n/2) + \underline{cn}$$

Recursive Tree

$n - n$   
 $n/2$

So you just have to keep this scenario in mind.
