

Quiz # 2

↓ n=1 OS - CS (v) - Solution

① fork() → n=2

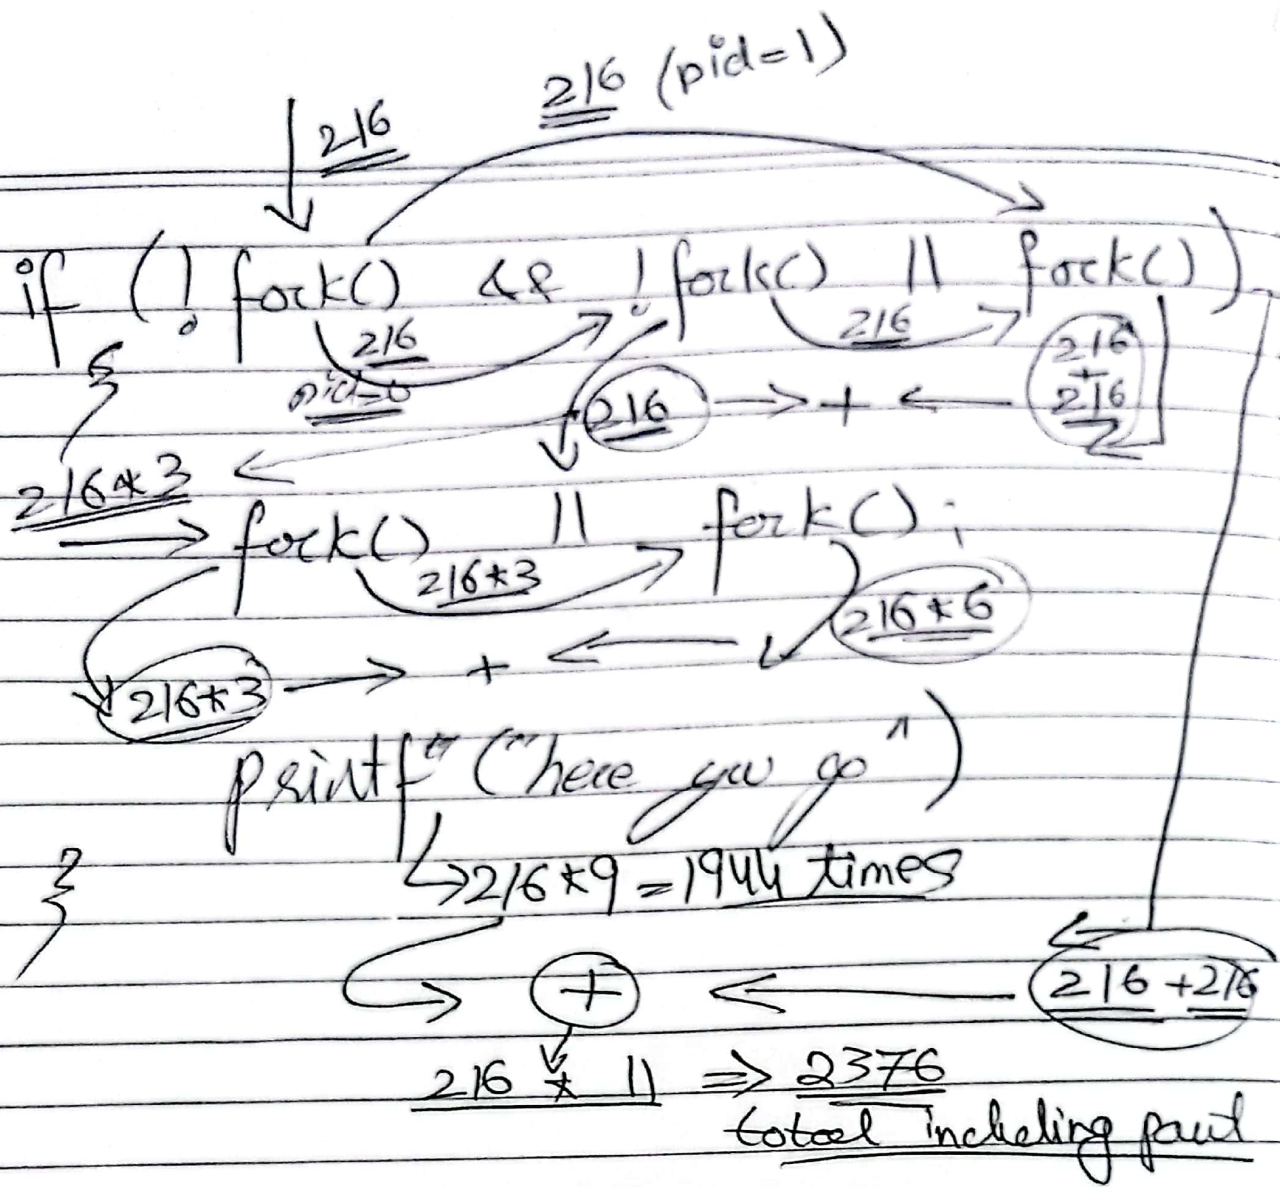

② Short Circuit (pid=0) n=2
fork() && fork() (pid=1) n=2
n=4 (pid=0/1)
→ 2+4 ←

③ Short Circuit (pid=1) n=6
fork() || fork() (pid=0) n=6
n=12 (pid=0/1)
→ 6+12 ←

④ Short Circuit (pid=1) n=18
fork() || fork() && fork() (pid=0) n=18
n=36 (pid=0/1)
→ 18+18+36 ←

⑤ 72 → printf("X")

if (!fork() && !fork())
72 (pid=0) →
72 (pid=0) →
72 times printf("if successful");
72 (pid=1)
72 (pid=1) 72+72+72
→ 216

$X \rightarrow 72 \text{ times} \rightarrow 3 \text{ Mocks}$

if successful $\rightarrow 72 \text{ times} \rightarrow 3 \text{ Mocks}$

here you go $\rightarrow 1944 \text{ times} \rightarrow 4 \text{ Mocks}$

Process Tree $\rightarrow 5 \text{ Mocks}$
