

MANAGING EMPLOYEE MOTIVATION AND PERFORMANCE

Chapter 10
Ricky Griffin

THE IMPORTANCE OF EMPLOYEE MOTIVATION IN THE WORKPLACE

FIGURE 10.1

The Motivation Framework

The motivation process progresses through a series of discrete steps. Content, process, and reinforcement perspectives on motivation address different parts of this process.

- **Motivation:** The set of forces that cause people to behave in certain ways

CONTENT PERSPECTIVES ON MOTIVATION

- **Content perspectives**: Approach to motivation that tries to answer the question, **What factor or factors motivate people?**
 - **Need for hierarchy**
 - **Maslow's hierarchy of needs**: Suggests that people must satisfy five groups of needs in order—**physiological**, **security**, **belongingness**, **self-esteem**, and **self-actualization**
 - **ERG theory of motivation**: Suggests that people's needs are grouped into **three** possibly overlapping categories—**existence**, **relatedness**, and **growth**

CONTENT PERSPECTIVES ON MOTIVATION

- **Two-factor theory of motivation:** Suggests that people's satisfaction and dissatisfaction are influenced by two independent sets of factors—**motivation factors** and **hygiene factors**

FIGURE 10.3

The Two-Factor Theory of Motivation

The two-factor theory suggests that job satisfaction has two dimensions. A manager who tries to motivate an employee using only **hygiene factors**, such as **pay** and **good working conditions**, will likely not succeed. To motivate employees and produce a high level of satisfaction, managers must also offer factors such as **responsibility** and the **opportunity** for advancement (**motivation factors**).

CONTENT PERSPECTIVES ON MOTIVATION

- **Content perspectives** : Approach to motivation that tries to answer the question, What factor or factors motivate people?
 - **Individual Human Needs**: The desire to accomplish a goal or task more effectively than in the past
 - **need for affiliation**: The desire for human companionship and acceptance
 - **need for power** : The desire to be influential in a group and to control one's environment

PROCESS PERSPECTIVES

- **Process perspectives:** Approaches to motivation that focus on why people choose certain behavioral options to fulfill their needs and how they evaluate their satisfaction after they have attained these goals
 - **Expectancy theory:** Suggests that motivation depends on two things — how much we want something and how likely we think we are to get it
 - **effort-to-performance expectancy:** The individual's perception of the probability that effort will lead to high performance
 - **performance-to-outcome expectancy:** The individual's perception that performance will lead to a specific outcome

PROCESS PERSPECTIVES

FIGURE 10.4

The Expectancy Model of Motivation

The expectancy model of motivation is a complex but relatively accurate portrayal of how motivation occurs. According to this model, a manager must understand what employees want (such as pay, promotions, or status) to begin to motivate them.

PROCESS PERSPECTIVES

- **Outcomes and Valences (expectancy theory):**
 - **outcomes**: Consequences of behaviors in an organizational setting, usually rewards
 - **valence**: An index of how much a person wants a particular outcome; the attractiveness of the outcome to the individual
- **The Porter-Lawler Extension:** Porter and Lawler suggested that there may indeed be a relationship between satisfaction and performance but that it goes in the opposite direction—that is, high performance may lead to high satisfaction

•

PROCESS PERSPECTIVES

FIGURE 10.5

The Porter-Lawler Extension of Expectancy Theory

The Porter-Lawler extension of expectancy theory suggests that if performance results in equitable rewards, people will be more satisfied. Thus, performance can lead to satisfaction. Managers must therefore be sure that any system of motivation includes rewards that are fair, or equitable, for all.

PROCESS PERSPECTIVES

- **equity theory**: Suggests that people are motivated to seek social equity in the rewards they receive for performance

$$\frac{\text{Individual Inputs}}{\text{Individual Outcomes}} = \frac{\text{Other's Inputs}}{\text{Other's Outcomes}}$$

- **Goal-Setting Theory** - The goal-setting theory of motivation assumes that behavior is a result of conscious goals and intentions
 - **Goal difficulty** is the extent to which a goal is challenging and requires effort. If people work to achieve goals, it is reasonable to assume that they will work harder to achieve more difficult goals. But a goal must not be so difficult that it is unattainable.
 - **Goal specificity** is the clarity and precision of the goal. A goal of “increasing productivity” is not very specific; a goal of “increasing productivity by 3 percent in the next six months” is quite specific.

PROCESS PERSPECTIVES

FIGURE 10.6

The Expanded Goal-Setting Theory of Motivation

One of the most important emerging theories of motivation is goal-setting theory. This theory suggests that goal difficulty, specificity, acceptance, and commitment combine to determine an individual's goal-directed effort. This effort, when complemented by appropriate organizational support and individual abilities and traits, results in performance. Finally, performance is seen as leading to intrinsic and extrinsic rewards that, in turn, result in employee satisfaction.

REINFORCEMENT PERSPECTIVES ON MOTIVATION

- **Reinforcement theory** - Approach to motivation that argues that behavior that results in rewarding consequences is likely to be repeated, whereas behavior that results in punishing consequences is less likely to be repeated
- **Kinds of Reinforcement in Organizations**
- **positive reinforcement** - A method of strengthening behavior with rewards or positive outcomes after a desired behavior is performed
- **avoidance** - Used to strengthen behavior by avoiding unpleasant consequences that would result if the behavior were not performed
- **punishment** - Used to weaken undesired behaviors by using negative outcomes or unpleasant consequences when the behavior is performed
- **extinction** - Used to weaken undesired behaviors by simply ignoring or not reinforcing them

REINFORCEMENT PERSPECTIVES ON MOTIVATION

- **Providing Reinforcement in Organizations**
 - **fixed-interval schedule** - Provides reinforcement at **fixed intervals** of time, such as regular weekly paychecks
 - **variable-interval schedule** - Provides reinforcement at **varying intervals** of time, such as **occasional visits** by the supervisor
 - **fixed-ratio schedule** - Provides reinforcement **after a fixed number of behaviors** regardless of the time interval involved, such as a **bonus for every fifth sale**
 - **variable-ratio schedule** - Provides reinforcement **after varying numbers of behaviors** are performed, such as the use of **compliments** by a supervisor **on an irregular basis**
 - **behavior modification (OB Mod)** - **Method** for **applying the basic elements of reinforcement theory** in an organizational setting

EMPOWERMENT

- **Empowerment** - The process of enabling workers to set their own work goals, make decisions, and solve problems within their sphere of responsibility and authority
- **Participation** - The process of giving employees a voice in making decisions about their own work
- **How to Empower Employees**
 - *Share information* openly
 - *Delegate real responsibility*
 - *Involve team in goal setting*
 - *Support learning and development*

EMPOWERMENT

- **Areas of Participation**
 - **addressing questions** and **making decisions** about their own jobs.
 - Instead of just telling them how to do their jobs, managers can **ask employees** to **make their own decisions** about how to do them.
 - Based on their **own expertise** and **experience** with their tasks, workers might be able to **improve their own productivity**.
 - In many situations, they might also be **well qualified** to **make decisions** about what materials to use, what tools are needed, and so forth.
 - It might also be **motivational** to **let workers make decisions** about **administrative matters**, such as work schedules.
 - If jobs are **relatively independent** of one another, employees might **decide when to change shifts**, **take breaks**, **go to lunch**, and so forth.
 - A **work group** or **team** might also be able to **schedule vacations** and **days off** for all of its members.

EMPOWERMENT

- **Techniques and Issues in Empowerment:** Simple techniques, such as suggestion boxes and question-and-answer meetings, allow a certain degree of participation,
 - **ways to extend participation** beyond the traditional areas.
 - **use of work teams:** Such teams are collections of employees empowered to plan, organize, direct, and control their own work.
 - Their supervisor, rather than being a traditional “boss,” plays more the role of a coach.
 - **change the team’s overall method of organizing:** The basic pattern is for an organization to eliminate layers from its hierarchy, thereby becoming much more decentralized.
 - Power, responsibility, and authority are subsequently delegated as far down the organization as possible, placing control over work squarely in the hands of those who actually do it

EMPOWERMENT

- **Conditions to make empowerment enhance organisational effectiveness**
 - Efforts to **spread empowerment** and **autonomy** should **be sincere** not just token efforts to spread participation
 - **organisation must be committed** to **maintaining** participation and empowerment. Workers will be **resentful** if they are given more control, only to **later have it reduced** or **have it taken back** or **reduced**
 - **workers must truly believe** that they and their managers are **working together** in their joint best interests

**QUESTIONS
PLEASE!**
