Quiz 1 (A)

Marks: 5

Q1. Read the following case study and answer the questions below.

In a corporate video conference held via Zoom, a diverse group of professionals gathered to discuss a critical project update. Among the participants were Sarah, the project manager, who led the meeting with her usual enthusiasm, and Mark, the head of the technical team, known for his meticulous problem-solving skills. In attendance were also Maya, the marketing specialist, and David, the financial analyst, who brought their unique perspectives to the discussion. The communication platform allowed these participants to connect from their respective locations around the world. However, as the meeting progressed, a significant problem arose. Due to a technical glitch in the audio settings, some participants, including Mark and Maya, experienced intermittent audio drops, making it difficult to follow the discussion. This issue disrupted the flow of the meeting and necessitated a quick troubleshooting session. Sarah, displaying her leadership skills, called for a brief pause to address the problem. With David's assistance, Mark and Maya worked to resolve the audio issue. After a few minutes of adjustments, the glitch was resolved, and the meeting resumed. Despite this hiccup, the team worked collaboratively to make up for lost time and had a productive and fruitful discussion regarding the project's progress, with everyone contributing their valuable insights.

1. What kind of communication setting did the conference have? (1)

The conference was a small group communication/online meeting.

2. Discuss the social context presented in the text above. (2)

As the participants do not share a personal relationship with each other, the context is primarily formal.

3. Was there any noticeable communication hurdle present during the conference?

Elaborate briefly. (2)

There was a drop in audio during the session which affected some participants, however, David, Maya and Mark helped each other in resolving the audio interruption.
