

Date

for loop :-

1. for (initialization ; condition ;
update)

{ // loop body
}

2. to print

1 2 3 4 . . . 10
So

cout << "1 2 3 ";

OR

int i = 1;

cout << i;

i++;

cout << i;

i++;

Date

→ for (int i = 1 ;

→ for (int i = 1 ; i <= 10 ; i++)
{ (3) cout << i << endl ;
}

// its execution & hence
cout << "out of for loop";

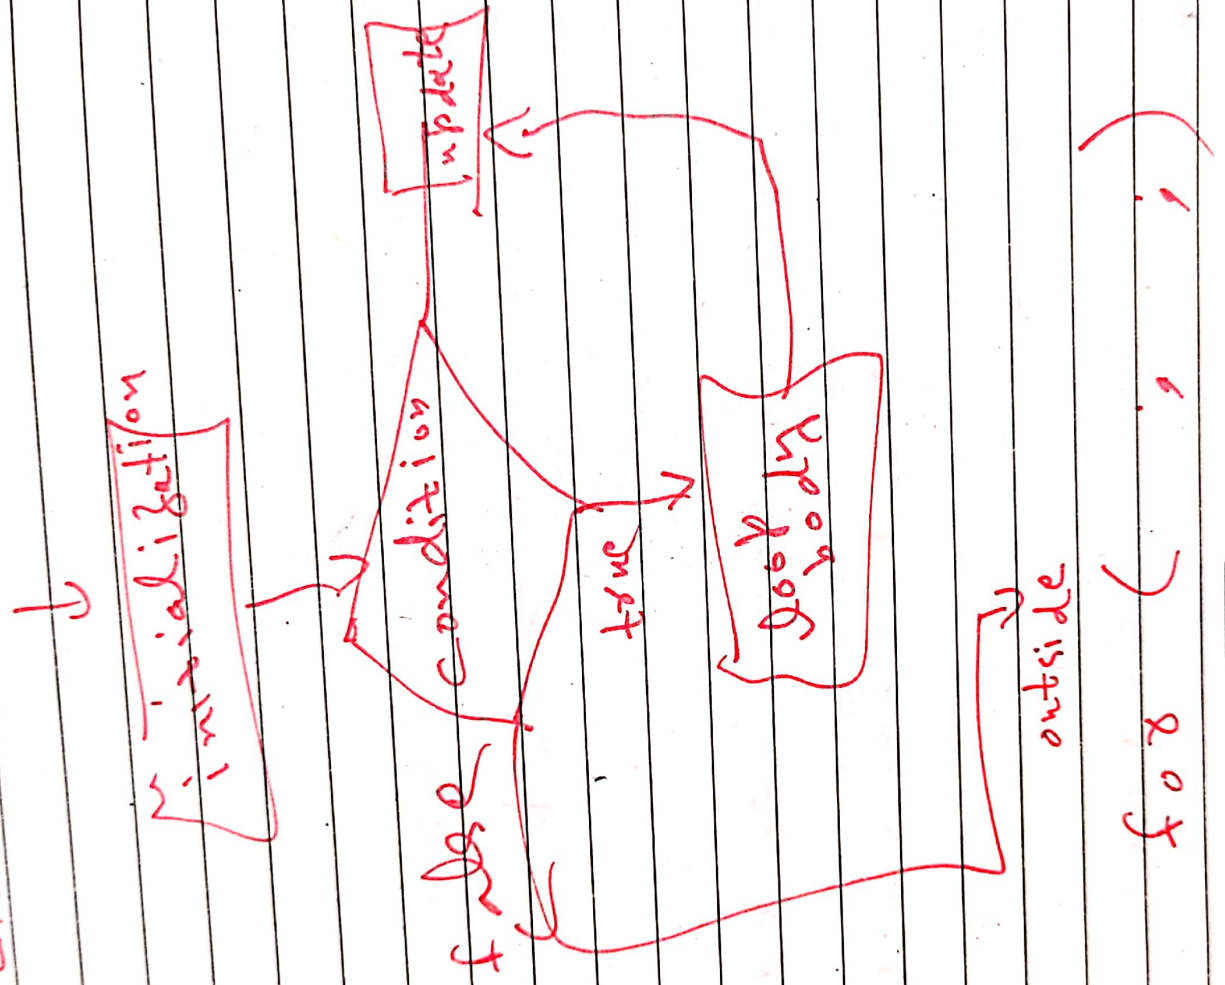

→ what if user enters
i.e. n = 5

$$1 + 2 + 3 + 4 + 5 = (15)$$

//
Show on
Screen.

→ flowchart

Date

→ for (int i=0; i<=10; i++)

{
 cout << i << endl;
}

~

→ for (int i=0; i==10; i++)

{
 cout << i << endl;
}

~

→ bracket concept of body

→ if, use instead;

→ try to understand
error msg if

good programmer.

→ what if

for (int i=0; i==10;

i++)

condition ~~can~~
always true.

{
 cout << i << endl;
}

Date

→ instead of `i < 10`
you can write any
expression.

→ Tricky things with
for loop.

→ `for ( ; )` | `for ( ; ; )`
error error

`for ( ; )`
mandatory
