★★

do-while loop

→ Syntax

do

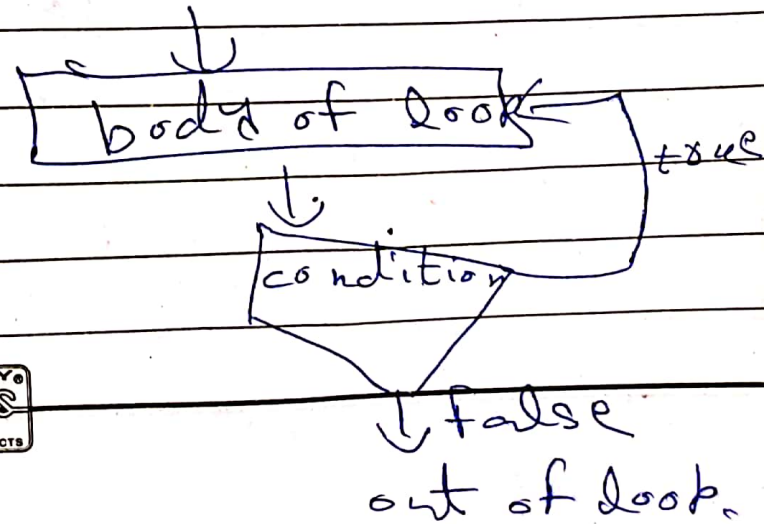

{

} while (condition);

→ if condition is false still
at time its body will be executed.

→ Exit control loop.

→ Flow chart

Date

--	--	--	--	--	--

→ Example.

```

int i = 0;
do {
    cout << "hello\n";
} while (i > 0);
cout << "out" ;

```

output

hello

out

in while
same :-

```

int i = 0;
while (i > 0)
{
    cout << "hello\n";
}
cout << "out" ;

```

output

out

* validation using do while.

int num;

do {

cout << "enter b/w 1 & 5" ;

cin >> num ;

} while (num <= 1 || num >= 5);

cout << "thanks" ;

→ not define num in do
it will show error coz out of
do in while its used.

→ output?

```
int i = 0;
do
{
    cout << "hello";
    i++;
} while (i > 0);
```

★ Another problem:

find area of triangle by asking
length & breadth.

show the area & again ask do
you want to calculate another
enter a for yes.

do { understand the problem

```
cin >> choice;
while (choice == 'Y' || choice == 'y');
```

Date

--	--	--	--	--	--	--	--

→ change the program to take
4 for quit, 1 for yes & other
to take another choice by showing
invalid choice.
